## Kim2018: response and clinical biomarkers within configurations

45 patients: 12 responders (R), 33 non-responders (NR); frozen configurations

▲ Responder (CR/PR) ○ Non-responder (SD/PD) ■ Yes □ No

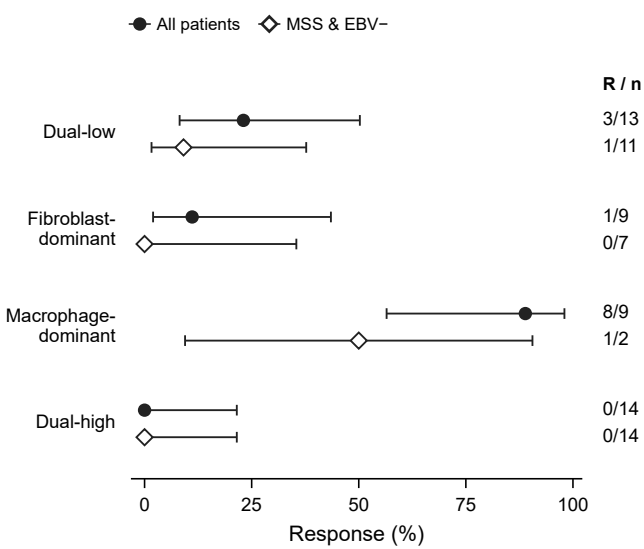

### A Patient-level map

Each column is one patient; dark/light cells = yes/no

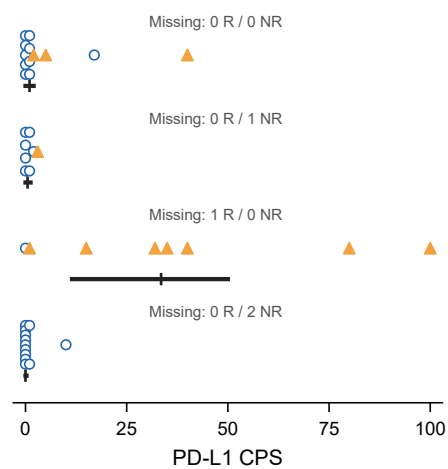

R = responders within the indicated biomarker-positive subgroup; CPS "–" = missing.

### B Full vs restricted response

### C CPS by response

Points: R / NR; black: median and IQR

Restriction: MSS and EBV ISH-negative, 34 patients / 2 responders. Whiskers in B: Wilson 95% intervals.

Descriptive display; the restricted group is nested within all patients. No new hypothesis tests or predictive model.
